

Ravi S. Prasher, Ph.D.
Lawrence Berkeley National Lab
MS: 70R0108B
1 Cyclotron Road, Berkeley, CA 94720
Email: rsprasher@lbl.gov

Summary:

- Technologist, researcher and educator with demonstrated accomplishments in industrial (Intel Corp.) technology start-up (Sheetak Inc.), academic (ASU), government sectors (ARPA-E) and national lab (LBNL)
- **Area of Expertise:** Nano to macroscale thermal energy process and systems, thermal storage, concentrated solar power, electronics cooling, waste heat harvesting, thermoelectrics
- **Research Experience:**
 - 93 archival journal publications (24 solo author) in top science and engineering journals (e.g. Nature Nanotechnology, Physical Review Letters)
 - More than 35 patents in the area of thermal energy based devices
 - **h-index:** 59 (based on Google Scholar)
 - **Citations:** more than 15,000 (based on Google Scholar)
 - Research funding received from: DOE, NSF and Office of Naval Research
 - Advised/served Ph.D. students/committees at Stanford, Berkeley and ASU
- **Teaching Experience:** Developed and taught two graduate level courses on nanoscale thermal transport and thermal properties production and taught undergraduate thermodynamics at ASU
- **Other**
 - Reviewer for multiple top science and engineering journals such as Science, Nature Materials, Nature Energy, Physical Review Letters & J. of Heat Transfer
 - Fellow of ASME (elected 2009, one of the youngest fellows at the age of 36)
 - and Sr. Member of IEEE
 - Intel Achievement Award (highest award for technical achievement in Intel) for electronics thermal management
 - Outstanding Engineer Award from IEEE Components and Packaging Society
 - Associate Editor: J. Heat Transfer, Nanoscale and Microscale thermophysical Engineering & Annual Reviews of Environment and Resources, IEEE Transactions on Components and Packaging Technology (2005-2016), ASME Journal of Thermal Science Engineering and Applications (2010 – 2013)

Employment:

Lawrence Berkeley National Laboratory, Berkeley, CA

Associate Lab Director, Energy Technology Area, July 2018 – Present

- Reporting directly to the Director, responsible for providing strategic leadership and management
- Energy Technology Area (ETA) at the Lawrence Berkeley National Laboratory researches batteries and fuel cells, electricity grid technologies and energy-efficient building technologies
- Yearly budget ~ \$125 M, Total number of staff ~450

University of California, Berkeley

Adjunct Professor, Department of Mechanical Engineering

- Conducting research in nano to macro scale thermal science and engineering for various applications such as batteries, building insulation, microelectronics thermal management and solar energy
- Conducting research on experimentally validate modeling of roll-to-toll manufacturing processes for various applications as Lithium ion batteries and fuel cells

Lawrence Berkeley National Laboratory, Berkeley, CA

Director, Energy Storage and Distributed Resources Division, June 2015 – Present

- Establish and sustain partnership with the wider science and technology ecosystem
- Accountable for Division budgets, funding, workforce planning, human resources management
- Actively shepherding three major new multidisciplinary research initiatives: 1) Cost-effective desalination 2) Science of scaling/manufacturing 3) Grid initiative
- Lab lead for science of manufacturing program for Advanced Manufacturing Office of DOE
- Established Thermal Energy Science and Technology Lab (TEST-Lab)

Sheetak Inc., Austin, Texas

Vice President, Product Development, Nov. 2012 – May 2015

- Sheetak is a device-to-systems thermoelectrics company focused on making low cost energy harvesters and converters based on its proprietary thermoelectrics material and devices
- Sheetak has been funded by private venture and various US government agencies due to its innovative thermoelectric chip and system
- I am responsible for developing an appliance that produces electricity based on thermoelectrics in collaboration with a major appliance maker
- Started the India subsidiary of Sheetak by relocating to India for one year

Advanced Research Projects Agency-Energy, US Department of Energy

Program Director: March 2010- November 2012

- I was one of the first program directors at ARPA-E. I was actively involved in creating the basic DNA of the agency. Due to the operational structure of ARPA-E, I got a panoramic view of the whole energy field
- As a program director my job involved program creation to define technology whitespace and opportunities, figuring out the right cost for new technology, convincing the ARPA-E director to appropriately fund the programs, selecting teams to develop technologies, active program management and developing technology commercialization strategies.
- Created and managed two programs on cooling/heating of buildings and thermal energy storage for applications such as automobiles, concentrated solar power, and fuel production from sunlight.
- Total value of the portfolio was ~ \$ 100M with more than 30 teams.
- Outreach activities for success of these programs involved significant interactions with venture capital community, other government agencies, large corporations & other entities.
- Cooling/heating program target was to develop disruptive cooling/heating technologies for buildings to increase the efficiency by > 50%
- Thermal storage program target was to deliver technologies that can increase the range of electric vehicles by ~40%, decrease cost of concentrated solar power < \$1/W and make sunlight to fuel efficiency > 10x of biofuels. The synopsis of the research behind the creation of this program was published in Science (Vol. 335, 1454, 2012).
- Technical advisory board member of the SunShot (DOE program on making solar electricity cost competitive with fossil fuel-based electricity) I advised the team on project selection and changing the technical direction to be in line with the goals of the program. I also actively participated in project selection.

Arizona State University (ASU), 2004-2013

Adjunct Professor, Dept. of Mech. and Aero. Eng.

- **Courses:**
 - Co-developed two graduate courses “*Nanoscale Thermal Transport*” and “*Thermal Properties Prediction*”
 - Taught undergraduate *thermodynamics & electronics cooling* section of the graduate course on *electronics packaging*
- **Research Funding:**

- System-level approach for multi-phase, nanotechnology-enhanced cooling of high-power microelectronic systems, \$500k (ASU portion), 05/01/07 - 04/31/12, Office of naval research, MURI
- Transport in nanoscale colloidal systems, \$307,218, 04/15/2004 - 03/31/07, National science foundation
- Nanoparticle-filled liquid fuels for efficient energy conversion, \$110,000, 09/01/06 - 08/31/07, national science foundation,
- Thesis committee member/co-advisor of various MS and PhD students

Intel Corporation: 1999-2010

- **Technology Development Manager**, Thermal and Fluids Core-Competency : A Team of 9 Ph.D. Engineers: 2006-2010
 - Research and development of advanced cooling technologies for Intel CPU
 - Development of new metrologies and modeling techniques for electronics thermal management
 - Development of thermal technology roadmap for electronics thermal management
 - Research and development of physics-based electronic package manufacturing
 - Research and development of advanced nano-materials
- **Sr. Technologist: 2003-2005**
 - Led various technology development projects: microchannels, thermal interface materials, Heat pipes, nanofluids, nanoscale thermoelectric
- **Sr. Thermal Engineer: 1999-2003**
 - Led various technology development projects: microchannels, thermal interface materials, heat pipes, nanofluids

Awards and honors

- **Fellow** of American Society of Mechanical Engineers (Elected 2009)
- Senior Member of IEEE (Elected 2005)
- Outstanding Young Engineer of the Year Award, Components and Packaging Society of IEEE, 2006
- Best Paper Award for “Predicted Efficiency of Nanofluid-Based Direct Absorption Solar Receiver,” Proceedings of ES 2007, Energy Sustainability 2007, Long Beach, California, June 27-30 by H. Tyagi, P. Phelan and R.S. Prasher
- **Intel Achievement Award** (highest award for technical achievement in Intel)
- IEEE society award for very significant contribution to the CPMT Phoenix Chapter

Other professional activities:

Publications:

- **More than 85 Archival Journal publications** in top science and engineering journals (Nature Nanotechnology, Science, Physical Review Letters, Journal of Heat Transfer and etc.)
- **4 book chapters** on thermal interface materials, nanofluids and electronics cooling

Patents:

More than 30 US patents on microchannels, heat pipes, thermoelectric, thermal interface materials, nanofluids, carbon nanotubes

Associate Editor:

- *IEEE Transactions on Components and Packaging Technology* (2005-present)
- *Nanoscale and Microscale Thermophysical Engineering* (2008-present)
- *ASME Journal of Thermal Science Engineering and Applications* (2010 – 2013)
- *Annual Reviews of Environment and Resources* (2013-2018)

Tutorial:

Taught a 4 hour tutorial on Micro/Nanotechnology in Electronics Thermal Management (with Prof. Ken Goodson of Stanford University) in the ASME InterPACK, and IOTHERM

Dissertation Committee Member of Students at Various Universities

- **Ph.D. committee: Stanford:** Xuejiao Hu (2005), Matt Panzer (2010); **U. of California Berkley:** Tao Tong (2007); **ASU:** Prajesh Bhattacharya (2005), Himanshu Tyagi (2008), Lucia Lai, Sabarish Vinod and Todd Otanicar (on going);
- **M.S committee: ASU:** Sridhar Nara (2005)

Panelist and Reviewer for Multiple Research Agencies:

NSF, Air Force Office of Scientific Research (AFOSR), American Chemical Society, US Department of Energy, National Research Council of Canada, World Bank

Reviewer for Various Archival Journals and Magazines:

Science, Nature Materials, Nature Energy, Scientific Reports, ACS Nano, Physical Review Letters, Physical Review B, J. Applied Physics, Physical Review E, ASME J. of Heat Transfer, Physics Letters A, ASME J. of Electronics Packaging, AIAA J. of Thermophysics and Heat Transfer, J. of Enhanced Heat Transfer, IEEE Transaction of Components and Packaging Technology, International J. of Thermal Sciences, International J. of Heat and Mass Transfer, Nano Today, Materials Today, Nano Letters

Invited Seminars and Lectures: Multiple invited seminars and lectures on Thermal Energy Transport and Conversion at places such as MIT, Ecole Centrale Paris Lawrence Berkeley National Laboratory, *Japan/U.S. Joint Seminar on Nanoscale Transport Phenomena - Science and Engineering*

Mentor for Semiconductor Research Corporation (SRC) (1999-present):

- Provide both technical and strategic guidance to universities for future research needs and current research
- Thesis committee member of Ph.D. students at Stanford University

iNEMI (International Electronics Manufacturing Initiative): Co-Chair of the 2009 iNEMI Thermal Roadmap Technology Working Groups (TWGs) & **Co-Chair** of 2007 Thermal Technology Integration Group

Education

01/96-05/99 **Arizona State University** Tempe, AZ

- Ph.D. in Mechanical Engineering, (Adviser: Dr. Pat Phelan)
- Minor: Electrical Engineering

07/91-05/95 **Indian Institute of Technology (IIT)** New Delhi, India

- BS in Mechanical Engineering

Ph.D. Dissertation: Size and Interfacial Effects on the Thermophysical Properties of Thin Solid Films

- Thermal analysis of solid state devices
- Proposed a universal dimensionless parameter for the prediction of size effects on the thermodynamic properties of solids
- Developed two analytical models to predict the thermal boundary resistance at the interface of thin films used in solid state devices and their substrates
- Developed an analytical model to describe the size effects on the specific heat of semiconductor thin films and microstructures due to their reduced dimension
